

CAMBODIA REDD+ PROGRAMME

Setting the context and introducing the activity

Mr. Khun Vathana, Head of the REDD+ Taskforce
Secretariat

Planning meeting on multiple benefits

1. April 2014

The value of economics

People cut forest down because they want the timber and/or the land.

This is partly because the value of forests is not fully recognized.

REDD+ can provide positive (economic) incentives to protect and use the forest better.

Forest value is not only carbon value

REDD+ results are measured in ton CO₂/year but the value of forest is much more than a CO₂ price per ton of reduced emissions.

This is the reason we also look at multiple benefits.

We also have costs

In the ideal situation decision makers should have the perfect overview of costs and benefits and how they are distributed when making decisions on REDD+.

This output of the UN-REDD Programme is about getting closer to this ideal situation and raise the awareness of both costs and benefits from forests and REDD+.

Thank You
